

# Module description

for the degree programme

Master of Science Integrated

Life Sciences: Biology,

Biomathematics, Biophysics

(Version of examination regulation: 20192)

# Table of contents

Advanced Module (48081).....	3
Introduction to statistics and statistical programming (48071).....	4
Master's thesis (1999).....	6
MG1: Mathematical Modelling and Systems Biology	
Biomathematics (48091).....	9
Systems Biology (48101).....	11
Mandatory Elective Modules Group 1	
Bioanalytics (42291).....	14
Complex systems I (48201).....	16
Complex systems II (48211).....	17
Complex systems III (48216).....	18
Complex systems IV (48217).....	19
Introduction to Mathematical Modeling (48161).....	20
Mathematical Image Processing (48241).....	22
Metabolic Networks II (48131).....	24
Partial Differential Equations for Life Sciences (48181).....	25
Spatial Modeling of Metabolic Processes (48142).....	27
Stochastic Models for Life Sciences (48151).....	29
MG2: Bioimaging and Biophysics	
Bioimaging and Biophysics A (48111).....	32
Bioimaging and Biophysics B (48112).....	34
Mandatory Elective Modules Group 2	
Cell Adhesion and Cytoskeleton: Cell Biological, Biophysical, and Medical Aspects (48500).....	37
Experimental Physics 3: Optics and Quantum Phenomena (66122).....	39
Mathematical Image Processing (48241).....	41
Methods of Modern (Confokal-) Light Microscopy (48331).....	43
Modern optics 1: Advanced optics (48311).....	44
Modern optics 3: Quantum optics (48313).....	45
Molecular Neurophysiology (63301).....	46
MG3: Biological Structures and Processes	
Interactions of Biological Macromolecules A (48121).....	49
Interactions of Biological Macromolecules B (48122).....	51
Mandatory Elective Modules Group 3	
Developmental Biology 2: Molecular Control of Stem Cell and Organ Differentiation (42241).....	53
Introduction to X-ray and neutron scattering 1 (48251).....	55
Introduction to X-ray and neutron scattering II (48261).....	57
Ion Transport And Signal Transduction (48301).....	59
Python for bioinformatics and data analysis (42062).....	61
Structural biology I: Protein design and designer proteins (42201).....	62
Structural biology II: Structure and function relationships in biotechnologically relevant macromolecules (42211).....	64

1	<b>Module name</b> 48081	<b>Advanced Module</b>	<b>20 ECTS</b>
2	Courses / lectures	No courses / lectures available for this module! The module has a workload of 600 hours, which are individually divided in contact hours and time for independent study (depending on the subject and research group.)	
3	Lecturers	No lecturers available since there are no courses / lectures for this module!	

4	<b>Module coordinator</b>	Prof. Dr. Rainer Böckmann
5	<b>Contents</b>	The advanced module can be chosen from courses and lectures of the Departments of Biology, Mathematics or Physics. It is designated to be a preparation for the Master thesis. Beside the work on a scientific project the module can include advanced lectures or special seminars of the respective Department which will be recommended by the advisor.
6	<b>Learning objectives and skills</b>	The students are <ul style="list-style-type: none"> <li>• familiar with the actual topics of the respective research area</li> <li>• able to discuss the actual topics of the research area critically</li> <li>• able to understand the modern methods and their application in science</li> <li>• able to develop independently complex ideas and strategies</li> <li>• able to work and learn independently</li> </ul>
7	<b>Prerequisites</b>	none
8	<b>Integration in curriculum</b>	semester: 3
9	<b>Module compatibility</b>	Pflichtmodul Master of Science Integrated Life Sciences: Biology, Biomathematics, Biophysics 20192
10	<b>Method of examination</b>	Oral (30 minutes)
11	<b>Grading procedure</b>	Oral (100%)
12	<b>Module frequency</b>	every semester
13	<b>Workload in clock hours</b>	Contact hours: - Independent study: -
14	<b>Module duration</b>	1 semester
15	<b>Teaching and examination language</b>	english
16	<b>Bibliography</b>	none

1	<b>Module name</b> 48071	<b>Introduction to Statistics and Statistical Programming</b> Introduction to statistics and statistical programming	<b>5 ECTS</b>
2	Courses / lectures	<p>Vorlesung: Introduction to Statistics and Statistical Programming (2 SWS)</p> <p>Übung: Computer lab classes "Introduction to Statistics and Statistical Programming" (1 SWS)</p> <p>Übung: Problem session "Introduction to Statistics and Statistical Programming" (1 SWS)</p> <p>Tutorium: Review session "Introduction to Statistics and Statistical Programming" (1 SWS)</p> <p>Review session: participation voluntary</p>	- - - -
3	Lecturers	Prof. Dr. Christophorus Richard	

4	<b>Module coordinator</b>	Prof. Dr. Christophorus Richard
5	<b>Contents</b>	<ul style="list-style-type: none"> <li>• Introduction to the statistical software R and elementary programming</li> <li>• Descriptive statistics: visualisation and parameters of categorial and metric data, qq-plot, curve fitting, log- and loglog-plots, robust techniques</li> <li>• Inferential statistics: methods for estimating and testing: parametric tests, selected non-parametric tests, exact and asymptotic confidence regions</li> <li>• Simulation: random numbers, Monte carlo</li> </ul>
6	<b>Learning objectives and skills</b>	<p>The students are able to</p> <ul style="list-style-type: none"> <li>• describe and explain standard techniques in descriptive and inferential statistics.</li> <li>• explain their solution of a non-trivial statistical problem to other people and to discuss alternative solutions within a group.</li> <li>• perform statistical standard analyses within a prescribed time limit on the computer, and to correctly interpret the computer output.</li> <li>• perform elementary statistical simulations.</li> <li>• formulate adequate questions concerning a given data set, suggest correct methods for analysis, and to implement these on the computer.</li> </ul>
7	<b>Prerequisites</b>	Stochastische Modellbildung (strongly recommended)
8	<b>Integration in curriculum</b>	semester: 2;1
9	<b>Module compatibility</b>	<p>MG1: Mathematical Modelling and Systems Biology Master of Science Integrated Life Sciences: Biology, Biomathematics, Biophysics 20152</p> <p>MG2: Bioimaging and Biophysics Master of Science Integrated Life Sciences: Biology, Biomathematics, Biophysics 20152</p> <p>MG3: Biological Structures and Processes Master of Science Integrated Life Sciences: Biology, Biomathematics, Biophysics 20152</p>

		Pflichtmodul Master of Science Integrated Life Sciences: Biology, Biomathematics, Biophysics 20192
10	<b>Method of examination</b>	Tutorial achievement Written examination (90 minutes)
11	<b>Grading procedure</b>	Tutorial achievement (0%) Written examination (100%)
12	<b>Module frequency</b>	only in summer semester
13	<b>Workload in clock hours</b>	Contact hours: 60 h Independent study: 90 h
14	<b>Module duration</b>	1 semester
15	<b>Teaching and examination language</b>	english
16	<b>Bibliography</b>	<ul style="list-style-type: none"> <li>• Lecture notes</li> <li>• Rice: Mathematical Statistics and Data Analysis; Thomson, 2007</li> <li>• <a href="http://www.cran.r-project.org">www.cran.r-project.org</a></li> </ul>

1	<b>Module name</b> 1999	<b>Master thesis (M.Sc. Integrated Life Sciences: Biology, Biomathematics, Biophysics 20192)</b> Master's thesis	<b>30 ECTS</b>
2	Courses / lectures	No courses / lectures available for this module! The Master Thesis has a workload of 900 hours, which are individually divided in contact hours and time for independent study (depending on the subject and research group.).	
3	Lecturers	No lecturers available since there are no courses / lectures for this module!	

4	<b>Module coordinator</b>	Prof. Dr. Rainer Böckmann	
5	<b>Contents</b>	Independent work on an actual topic of the respective research area within a fixed period (6 months) <ul style="list-style-type: none"> <li>• make up a scientific report</li> <li>• oral presentation and discussion of the results (30 min) within a seminar</li> </ul>	
6	<b>Learning objectives and skills</b>	The students are <ul style="list-style-type: none"> <li>• able to work independently with scientific methods on a specific task</li> <li>• demonstrate their ability to apply experimental, theoretical, and/or computational approaches on adequately challenging biophysical or biomathematical research topics</li> <li>• are able to describe and discuss their results professionally in form of a scientific manuscript</li> <li>• able to present the results of the scientific project in a report</li> <li>• are able to apply the acquired skills in future.</li> </ul>	
7	<b>Prerequisites</b>	60 ECTS in MA Integrated Life Sciences	
8	<b>Integration in curriculum</b>	semester: 4	
9	<b>Module compatibility</b>	Pflichtmodul Master of Science Integrated Life Sciences: Biology, Biomathematics, Biophysics 20192	
10	<b>Method of examination</b>	Course achievement Written (6 Monate) PL: Master thesis approx. 20000 words SL: Scientific report 30 min.	
11	<b>Grading procedure</b>	Course achievement (0%) Written (100%) Master thesis 100%	
12	<b>Module frequency</b>	every semester	
13	<b>Resit examinations</b>	The exams of this moduls can only be resit once.	
14	<b>Workload in clock hours</b>	Contact hours: - Independent study: -	
15	<b>Module duration</b>	1 semester	
16	<b>Teaching and examination language</b>	english	

# MG1: Mathematical Modelling and Systems Biology

1	<b>Module name</b> 48091	<b>Biomathematics</b>	<b>10 ECTS</b>
2	Courses / lectures	The teaching units in the module are only offered in the winter semester.	
3	Lecturers	-	

4	<b>Module coordinator</b>	Prof. Vasily Zaburdaev
5	<b>Contents</b>	<ul style="list-style-type: none"> <li>• Systems of difference equations and of ordinary differential equations</li> <li>• Existence and uniqueness of solutions, steady-state solutions, linear stability analysis</li> <li>• Qualitative behavior and phase plane analysis</li> <li>• Discrete and continuous models for interacting populations (predator-pray models, competition models, mutualism and symbiosis)</li> <li>• Epidemic models and the dynamics of infectious diseases</li> <li>• Reaction kinetics (mass-action, enzyme kinetics)</li> <li>• Regulation mechanisms in biological systems</li> <li>• Excitable systems and dynamic behavior of neuronal membranes</li> </ul>
6	<b>Learning objectives and skills</b>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>• analyse and simulate systems of ordinary differential equations</li> <li>• possess profound knowledge in the area of mathematical modelling of processes in biology</li> <li>• recognise the most important underlying mechanisms in biochemical and biophysical systems and give quantitative descriptions</li> <li>• acquire problem-oriented learning strategies and improve their skills in interdisciplinary approaches</li> </ul>
7	<b>Prerequisites</b>	none
8	<b>Integration in curriculum</b>	semester: 1;2
9	<b>Module compatibility</b>	MG1: Mathematical Modelling and Systems Biology Master of Science Integrated Life Sciences: Biology, Biomathematics, Biophysics 20192
10	<b>Method of examination</b>	Portfolio PL: Oral examination 30 min. SL: Paper- and Computer exercises as a measure of performance level (exercise book; approx. 50 pages)
11	<b>Grading procedure</b>	Portfolio (100%) Oral examination 100%
12	<b>Module frequency</b>	only in winter semester
13	<b>Workload in clock hours</b>	Contact hours: 90 h Independent study: 210 h
14	<b>Module duration</b>	1 semester
15	<b>Teaching and examination language</b>	english

16	<b>Bibliography</b>	<ul style="list-style-type: none"><li>• Systems Biology. A Textbook, Klipp, Liebermeister, Wierling, Kowald, Lehrach, Herwig, 2010.</li><li>• A course in Mathematical Biology, de Vries, Hillen, Lewis, Müller, Schönfisch, 2006</li></ul>
----	---------------------	---

1	<b>Module name</b> 48101	<b>Systems Biology</b>	<b>5 ECTS</b>
2	Courses / lectures	The teaching units in the module are only offered in the winter semester.	
3	Lecturers	-	

4	<b>Module coordinator</b>	Prof. Dr. Uwe Sonnewald
5	<b>Contents</b>	<p><b>Lecture:</b> The contents of the module deal with the following research topic in systems biology:</p> <ul style="list-style-type: none"> <li>• Genomics</li> <li>• Transcriptomics</li> <li>• Proteomics</li> <li>• Metabolomics</li> <li>• Network analysis</li> <li>• Computer models for biological pattern formation</li> </ul> <p><b>Laboratory course:</b> Using experimental and computational approaches biological processes in cells, organs and organisms will be quantitatively analysed. Furthermore, next generation sequencing methods (NGS), and array-based transcriptome studies will be demonstrated.</p>
6	<b>Learning objectives and skills</b>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>• explain the general principles of genomics, transcriptomics, proteomics and metabolomics.</li> <li>• describe basically the technological basis of omics technologies.</li> <li>• Understanding of bioinformatics in data mining and storage</li> <li>• analyse and to recognize patterns in complex protein, DNA or RNA data and to develop hypotheses on the basis of omics data</li> <li>• explain and distinguish biological processes at the systems level</li> <li>• independently solve biological questions with computational methods</li> <li>• apply conceptual application of quantitative models in biology</li> <li>• independently develop working hypotheses and to adapt existing models and programs to test these hypotheses</li> <li>• perform independent further training</li> </ul>
7	<b>Prerequisites</b>	none
8	<b>Integration in curriculum</b>	semester: 1;2
9	<b>Module compatibility</b>	MG1: Mathematical Modelling and Systems Biology Master of Science Integrated Life Sciences: Biology, Biomathematics, Biophysics 20192
10	<b>Method of examination</b>	Written examination (60 minutes)
11	<b>Grading procedure</b>	Written examination (100%)
12	<b>Module frequency</b>	only in winter semester
13	<b>Workload in clock hours</b>	Contact hours: 45 h

		Independent study: 105 h
14	<b>Module duration</b>	1 semester
15	<b>Teaching and examination language</b>	english
16	<b>Bibliography</b>	-

# Mandatory Elective Modules Group 1

1	<b>Module name</b> 42291	<b>Bioanalytics</b>	<b>7,5 ECTS</b>
2	Courses / lectures	Seminar und Übung: Orientierungsmodul Biochemie IV: Bioanalytik (BCMA4) (8 SWS)	7,5 ECTS
3	Lecturers	Prof. Dr. Uwe Sonnewald Dr. Jörg Hofmann Dr. Christian Lamm	

4	<b>Module coordinator</b>	Prof. Dr. Uwe Sonnewald	
5	<b>Contents</b>	<p><b>Lecture and Seminar:</b> The contents of the module deal with the following research topics in systems biology:</p> <ul style="list-style-type: none"> <li>• Plant transformation techniques</li> <li>• Agricultural Biotechnology</li> <li>• Metabolomics</li> <li>• Proteomics</li> <li>• Transcriptomics</li> </ul> <p><b>Laboratory course:</b> The practical work will be a comparative analysis of different plant genotypes or of plants grown under different environmental conditions. Analysis will include metabolite extraction and analysis using HPLC-MS/MS as well as proteome analysis by mass spectrometry.</p>	
6	<b>Learning objectives and skills</b>	<p>Students will acquire the following skills:</p> <ul style="list-style-type: none"> <li>• General understanding of proteomics and metabolomics.</li> <li>• The ability to design and conduct comparative metabolomics and proteomics experiments</li> <li>• The ability to recognize patterns in complex protein and metabolite data with the help of multivariate data analysis and to develop hypotheses on the basis of these data</li> <li>• A good understanding of biological processes at the systems level</li> <li>• The ability to independently solve biological questions using metabolomics and proteomics experiments</li> <li>• The ability of independently develop working hypotheses and to test these.</li> </ul>	
7	<b>Prerequisites</b>	none	
8	<b>Integration in curriculum</b>	semester: 2;1	
9	<b>Module compatibility</b>	Mandatory Elective Modules Group 1 Master of Science Integrated Life Sciences: Biology, Biomathematics, Biophysics 20192	
10	<b>Method of examination</b>	Portfolio PL: oral exam 30 min. SL: written protocol 20 p. SL: presentation 30 min.	
11	<b>Grading procedure</b>	Portfolio (100%) oral exam 100%	
12	<b>Module frequency</b>	only in summer semester	

13	<b>Workload in clock hours</b>	Contact hours: 120 h Independent study: 105 h
14	<b>Module duration</b>	1 semester
15	<b>Teaching and examination language</b>	english
16	<b>Bibliography</b>	not required

1	<b>Module name</b> 48201	<b>Complex Systems I</b> Complex systems I	<b>5 ECTS</b>
2	Courses / lectures	No teaching units are offered for the module in the current semester. For further information on teaching units please contact the module managers.	
3	Lecturers	-	

4	<b>Module coordinator</b>	PD Dr. Claus Metzner
5	<b>Contents</b>	Power laws, phase transitions, Ising model, percolation, selforganized criticality, graphs, regular and random networks, real world networks, Barabasi-Albert model, Watts-Strogatz model, applied network theory, optimization, fitness landscapes, Monte-Carlo and simulated annealing, evolutionary optimization, evolution dynamics, genetic drift, discrete optimization, genetic programming, reaction processes, rate equations, Michaelis-Menton kinetics, covalent modification cycles, ultra-sensitivity, hysteresis, chemical oscillators, signal networks in cells, chemotaxis of E. Coli, cybernetics, control loops, entropy and information, reaction-diffusion systems, Turing mechanism, morphogenesis
6	<b>Learning objectives and skills</b>	<ul style="list-style-type: none"> <li>• Intuitive understanding of multidisciplinary problems in the field of critical phenomena, networks, evolutionary dynamics, reaction systems;</li> <li>• Understanding of basic theoretical concepts, mathematical and computer simulation methods;</li> <li>• Ability to use the methods and concepts in exercises;</li> <li>• Training of analytical, critical thinking and model building.</li> </ul>
7	<b>Prerequisites</b>	Required knowledge: Basics of analysis, differential equations and statistics.
8	<b>Integration in curriculum</b>	semester: 1;2
9	<b>Module compatibility</b>	Mandatory Elective Modules Group 1 Master of Science Integrated Life Sciences: Biology, Biomathematics, Biophysics 20192
10	<b>Method of examination</b>	Written examination (90 minutes)
11	<b>Grading procedure</b>	Written examination (100%)
12	<b>Module frequency</b>	Unregelmäßig
13	<b>Workload in clock hours</b>	Contact hours: 60 h Independent study: 90 h
14	<b>Module duration</b>	1 semester
15	<b>Teaching and examination language</b>	english
16	<b>Bibliography</b>	Material on the various specific topics is provided during the course.

1	<b>Module name</b> 48211	<b>Complex Systems II</b> Complex systems II	<b>5 ECTS</b>
2	Courses / lectures	Vorlesung mit Übung: Complex Systems: Econo/Socio physics, continuum dynamical systems (4 SWS)	5 ECTS
3	Lecturers		

4	<b>Module coordinator</b>	PD Dr. Claus Metzner
5	<b>Contents</b>	<b>Contents</b> Dynamics of car traffic and passengers, epidemiology, SIR model, city growth, voting dynamics, egoism and cooperation, economy and physics, market equilibrium, El-Farol bar problem, minority games, evolution and innovation, lock-in, stock market fluctuations and modelling, portfolio optimization, phase space dynamics, attractors, time series, dynamical systems theory, chaos theory, quantum chaos.
6	<b>Learning objectives and skills</b>	The students are able to: <ul style="list-style-type: none"> <li>• understand intuitively multidisciplinary problems in the field of Econo/Socio physics, continuum and discrete dynamical systems;</li> <li>• understand intuitively multidisciplinary problems;</li> <li>• understand the basic theoretical concepts, mathematical and computer simulation</li> <li>• methods;</li> <li>• use the methods and concepts in exercises;</li> <li>• apply analytical, critical thinking and model building.</li> </ul>
7	<b>Prerequisites</b>	Required knowledge: Basics of analysis, differential equations and statistics.
8	<b>Integration in curriculum</b>	semester: 2;1
9	<b>Module compatibility</b>	Mandatory Elective Modules Group 1 Master of Science Integrated Life Sciences: Biology, Biomathematics, Biophysics 20192
10	<b>Method of examination</b>	Written examination (90 minutes)
11	<b>Grading procedure</b>	Written examination (100%)
12	<b>Module frequency</b>	Unregelmäßig
13	<b>Workload in clock hours</b>	Contact hours: 60 h Independent study: 90 h
14	<b>Module duration</b>	1 semester
15	<b>Teaching and examination language</b>	english
16	<b>Bibliography</b>	-

1	<b>Module name</b> 48216	<b>Complex Systems III</b> Complex systems III	<b>5 ECTS</b>
2	Courses / lectures	No teaching units are offered for the module in the current semester. For further information on teaching units please contact the module managers.	
3	Lecturers	-	

4	<b>Module coordinator</b>	PD Dr. Claus Metzner
5	<b>Contents</b>	Synchronization, Kuramoto theory, self-organization, swarm dynamics, stigmergy, synergetics, Bayesian learning, game theory, Nash equilibrium, minimax solution, mixed strategies, imperfect information, evolutionary game theory, prisoner's dilemma, strategies with memory, self-organizing cooperation, cellular automata, coupled map lattices, boolean networks, Kauffman N-K networks.
6	<b>Learning objectives and skills</b>	The students are able to: <ul style="list-style-type: none"> <li>• understand intuitively multidisciplinary problems in the field of Self-organization, game theory, discrete dynamical systems;</li> <li>• understand intuitively multidisciplinary problems in the field of Understanding of basic theoretical concepts, mathematical and computer simulation methods;</li> <li>• use the methods and concepts in exercises apply analytical, critical thinking and model building.</li> </ul>
7	<b>Prerequisites</b>	Required knowledge: Basics of analysis, differential equations and statistics.
8	<b>Integration in curriculum</b>	semester: 1;2
9	<b>Module compatibility</b>	Mandatory Elective Modules Group 1 Master of Science Integrated Life Sciences: Biology, Biomathematics, Biophysics 20192
10	<b>Method of examination</b>	Written examination (90 minutes)
11	<b>Grading procedure</b>	Written examination (100%)
12	<b>Module frequency</b>	Unregelmäßig
13	<b>Workload in clock hours</b>	Contact hours: 60 h Independent study: 90 h
14	<b>Module duration</b>	1 semester
15	<b>Teaching and examination language</b>	english
16	<b>Bibliography</b>	-

1	<b>Module name</b> 48217	<b>Complex Systems IV</b> Complex systems IV	<b>5 ECTS</b>
2	Courses / lectures	Vorlesung mit Übung: Complex Systems 2: Econo/ Socio physics, continuum dynamical systems (4 SWS)	5 ECTS
3	Lecturers	PD Dr. Claus Metzner	

4	<b>Module coordinator</b>	PD Dr. Claus Metzner
5	<b>Contents</b>	Shannon information theory, information processing, central nervous system, human brain, biological neurons, neuron models, perceptrons, pattern recognition, classification, network training, associative memory, Hopfield networks, selforganizing maps, biological neural networks, machine learning approaches, Boltzmann machines, generative stochastic models, contrastive divergence learning, auto-encoders, self-organized feature detectors, deep belief networks, deep learning and physics, convolutional networks, image recognition, computer generated art.
6	<b>Learning objectives and skills</b>	The students are able to: <ul style="list-style-type: none"> <li>• understand intuitively multidisciplinary problems in the field of Information, neurophysics, machine learning;</li> <li>• understand intuitively multidisciplinary problems in the field of Understanding of basic theoretical concepts, mathematical and computer simulation methods;</li> <li>• use the methods and concepts in exercises apply analytical, critical thinking and model building</li> <li>• apply analytical, critical thinking and model building.</li> </ul>
7	<b>Prerequisites</b>	Required knowledge: Basics of analysis, differential equations and statistics.
8	<b>Integration in curriculum</b>	semester: 2;1
9	<b>Module compatibility</b>	Mandatory Elective Modules Group 1 Master of Science Integrated Life Sciences: Biology, Biomathematics, Biophysics 20192
10	<b>Method of examination</b>	Written examination (90 minutes)
11	<b>Grading procedure</b>	Written examination (100%)
12	<b>Module frequency</b>	Unregelmäßig
13	<b>Workload in clock hours</b>	Contact hours: 60 h Independent study: 90 h
14	<b>Module duration</b>	1 semester
15	<b>Teaching and examination language</b>	english
16	<b>Bibliography</b>	-

1	<b>Module name</b> 48161	<b>Introduction to Mathematical Modeling</b>	<b>10 ECTS</b>
2	Courses / lectures	The teaching units in the module are only offered in the winter semester. compulsory attendance (project)	
3	Lecturers	-	

4	<b>Module coordinator</b>	PD Dr. Serge Kräutle	
5	<b>Contents</b>	<p>The module combines theory and practice, it links and extends the contents of various introductory math courses.</p> <p><b>Theory: (lecture and tutorial)</b></p> <ul style="list-style-type: none"> <li>• Methods (basic tools) of mathematical modeling, such as dimensional analysis, asymptotic expansions, stability, sensitivity, existence and positivity of solutions</li> <li>• Models given by linear systems (electric circuits, girder bridge, relation to minimization problems), by non-linear systems of equations (chemical reactions), and by initial value problems of differential equations (predator-prey models, biological models)</li> </ul> <p><b>Practice: (project work in team):</b></p> <p>Modeling, analytical investigation and solving of problems coming from engineering and natural sciences (e.g. mechanics or life science)</p>	
6	<b>Learning objectives and skills</b>	<p>The students</p> <ul style="list-style-type: none"> <li>• get to know the basic methods of mathematical modelling and apply the approaches to real-life problems</li> <li>• develop, analyse and evaluate mathematical models given by systems of algebraic or differential equations</li> <li>• solve real-life problems in a team by using analytical and numerical methods</li> <li>• develop the competence to solve general problems</li> <li>• develop management skills (team work, time and project management), are empowered by reporting in the projects to lecture presentation and scientific writing (The attendance of the project is compulsory due to the teamwork.)</li> </ul>	
7	<b>Prerequisites</b>	Modules of analysis and linear algebra or introductory math courses of two semesters are strongly recommended. Basic Knowledge in numerical mathematics (use of MATLAB) and knowledge in ordinary differential equations is recommended.	
8	<b>Integration in curriculum</b>	semester: 1;2	
9	<b>Module compatibility</b>	Mandatory Elective Modules Group 1 Master of Science Integrated Life Sciences: Biology, Biomathematics, Biophysics 20192	
10	<b>Method of examination</b>	<p>Portfolio</p> <p>PL: Oral examination 20 min.</p> <p>PL: seminar talk about status-quo and progress of the project work (20 min.) and a written assignment about the final results in the project (20 pages)</p>	
11	<b>Grading procedure</b>	Portfolio (100%)	

		Examination about theoretical part (oral examination): 50% Examination about practical part: 50%
12	<b>Module frequency</b>	only in winter semester
13	<b>Workload in clock hours</b>	Contact hours: 90 h Independent study: 210 h
14	<b>Module duration</b>	1 semester
15	<b>Teaching and examination language</b>	german
16	<b>Bibliography</b>	Ch. Eck, H. Garcke, P. Knabner. "Mathematische Modellierung". Springer-Verlag, 2. Auflage, Berlin 2011  F. Hauser, Y. Luchko. "Mathematische Modellierung mit MATLAB". Spektrum Akademischer Verlag 2011  G. Strang. "Introduction to Applied Mathematics". Wellesley-Cambridge Press, Wellesley 1986

1	<b>Module name</b> 48241	<b>Mathematical Image Processing</b>	<b>5 ECTS</b>
2	Courses / lectures	Vorlesung mit Übung: Mathematical Image Processing (2 SWS) Tutorium: Tutorial for Mathematical Image Processing (1 SWS) This module is offered in every second summer term. The next course will be held in the summer semester 2024.	5 ECTS -
3	Lecturers	Dr. Daniel Tenbrinck	

4	<b>Module coordinator</b>	Dr. Daniel Tenbrinck	
5	<b>Contents</b>	<p>This module covers mathematical image processing techniques based on Fourier domain filters, variational methods, and partial differential equations.</p> <p>In particular, the following content will be introduced to the students:</p> <ul style="list-style-type: none"> <li>• contrast enhancement</li> <li>• filtering in Fourier and image domain</li> <li>• Bayesian image denoising</li> <li>• image deblurring / deconvolution</li> <li>• pixel-based clustering</li> <li>• region-based segmentation</li> <li>• image inpainting</li> <li>• nonlocal image processing using graphs</li> </ul>	
6	<b>Learning objectives and skills</b>	<p>Students following this course will</p> <ul style="list-style-type: none"> <li>• learn how image data can be modeled and analyzed mathematically</li> <li>• develop a deeper understanding of mathematical basics and methods for image processing</li> <li>• implement own algorithms for mathematical image processing</li> <li>• discover connections to related mathematical fields, e.g., inverse problems and convex analysis</li> </ul>	
7	<b>Prerequisites</b>	<p>Knowledge in calculus and linear algebra is <b>recommended</b> to understand the mathematical foundations of image processing.</p> <p>Knowledge in functional analysis, numerical mathematics, or inverse problems is <b>helpful</b> to understand advanced concepts in mathematical image processing.</p>	
8	<b>Integration in curriculum</b>	semester: 2;1	
9	<b>Module compatibility</b>	<p>Mandatory Elective Modules Group 1 Master of Science Integrated Life Sciences: Biology, Biomathematics, Biophysics 20192</p> <p>Mandatory Elective Modules Group 2 Master of Science Integrated Life Sciences: Biology, Biomathematics, Biophysics 20192</p>	
10	<b>Method of examination</b>	<p>Written or oral</p> <p>Oral examination (20 min.) or written examination (60 min.) depending on size of course.</p>

1	<b>Module name</b> 48181	<b>Partial Differential Equations for Life Sciences</b>	<b>5 ECTS</b>
2	Courses / lectures	Vorlesung: Partial Differential Equations for Life Sciences (2 SWS) Übung: Tutorial to Partial Differential Equations for Life Sciences (2 SWS)	- -
3	Lecturers	Prof. Dr. Maria Neuß	

4	<b>Module coordinator</b>	Prof. Dr. Maria Neuß	
5	<b>Contents</b>	<ul style="list-style-type: none"> <li>• Derivation of partial differential equations for processes in life sciences and corresponding initial- and boundary-value problems</li> <li>• Analysis of linear partial differential equations, Maximum principle</li> <li>• Nonlinear elliptic and parabolic equations and systems</li> <li>• Applications to processes in life sciences: reaction, diffusion, convection, transport in chemical or electrical gradients (like in Chemotaxis or Nernst-Planck)</li> <li>• Tutorials: Various methods for solving PDEs are introduced and trained: Method of characteristics, Separation of variables, Travelling wave solutions etc.</li> </ul>	
6	<b>Learning objectives and skills</b>	<p>Students</p> <ul style="list-style-type: none"> <li>• possess elementary knowledge in the area of mathematical modelling with partial differential equations</li> <li>• are able to analyse well posedness for elementary partial differential equations</li> <li>• apply methods for solving elementary partial differential equations</li> <li>• acquire problem-oriented learning strategies and improve their skills in interdisciplinary approaches</li> </ul>	
7	<b>Prerequisites</b>	none	
8	<b>Integration in curriculum</b>	semester: 2;1	
9	<b>Module compatibility</b>	Mandatory Elective Modules Group 1 Master of Science Integrated Life Sciences: Biology, Biomathematics, Biophysics 20192	
10	<b>Method of examination</b>	Written or oral PL: Written examination 60 min. SL: Paper- and Computer exercises as a measure of performance level (exercise book; approx. 50 pages)	
11	<b>Grading procedure</b>	Written or oral (100%) written exam 100%	
12	<b>Module frequency</b>	only in summer semester	
13	<b>Workload in clock hours</b>	Contact hours: 60 h Independent study: 90 h	
14	<b>Module duration</b>	1 semester	

15	<b>Teaching and examination language</b>	english
16	<b>Bibliography</b>	A course in Mathematical Biology, de Vries, Hillen, Lewis, Müller, Schönfisch, 2006

1	<b>Module name</b> 48142	<b>Spatial Modeling of Metabolic Processes</b>	<b>10 ECTS</b>
2	Courses / lectures	The teaching units in the module are only offered in the winter semester.	
3	Lecturers	-	

4	<b>Module coordinator</b>	Prof. Dr. Maria Neuß Prof. Dr. Uwe Sonnewald
5	<b>Contents</b>	<p><b>Lecture</b></p> <p>a) The biological part deals with the following topics:</p> <ul style="list-style-type: none"> <li>• Metabolic Networks</li> <li>• Allosteric Regulation of Metabolism The dual role of metabolites as signalling molecules and intermediates</li> <li>• Metabolite Channeling</li> <li>• Reversible Formation of Protein Complexes</li> <li>• Concepts of Synthetic Biology</li> <li>• Membrane Transport and Membrane Association of Proteins</li> </ul> <p>b) Within the mathematical part, the mathematical modeling of the processes studied in the biological part is performed and the models are simulated by using standard simulation software like e.g. Matlab. The mathematical and simulation approaches include:</p> <ul style="list-style-type: none"> <li>• modelling approaches accounting for the spatial structure of cells: compartments, organelles, membrane systems and the spatial distribution of enzymes and metabolites</li> <li>• a hierarchy of mathematical models are considered, including compartment models (systems of coupled ordinary differential equations) and continuous models in space and time (systems of partial differential equations) like reaction -diffusion-transport systems subjected to appropriate boundary and transmission conditions</li> <li>• implementation of temporal and spatial discretizations for transmission problems in Matlab or other simulation software.</li> </ul> <p><b>Laboratory course</b></p> <p>Metabolite quantitation by HPLC-tandem mass spectrometry. Protein biochemistry to assess the architecture of protein complexes: differential centrifugation, SDS-PAGE, western blot, etc.</p> <p><b>Tutorial</b></p> <p>Within the tutorial, the mathematical notions are discussed and deepened by means of blackboard and computer homework</p>
6	<b>Learning objectives and skills</b>	<p>Students</p> <ul style="list-style-type: none"> <li>• gain insight into feedback regulation of plant metabolism by metabolic intermediates</li> <li>• learn to conduct advanced analytical methods</li> <li>• are in touch with state-of-the art research topics</li> <li>• will be trained to apply the acquired knowledge on the analysis of protein complexes</li> <li>• acquire a in-depth knowledge and understanding in the area of mathematical modelling of intracellular processes</li> </ul>

		<ul style="list-style-type: none"> <li>• compare different modelling and simulation approaches and interpret the results in the framework of the biological application</li> <li>• investigate working methods from different disciplines (biology and mathematics) and develop new interdisciplinary approaches.</li> </ul>
7	<b>Prerequisites</b>	Suggested: Module Partial differential equations for life sciences
8	<b>Integration in curriculum</b>	semester: 3;2
9	<b>Module compatibility</b>	Mandatory Elective Modules Group 1 Master of Science Integrated Life Sciences: Biology, Biomathematics, Biophysics 20192
10	<b>Method of examination</b>	Written or oral (60 minutes) PL: Written examination 90 min. SL: Paper- and Computer exercises as a measure of performance level (exercise book; approx. 50 pages)
11	<b>Grading procedure</b>	Written or oral (100%) Written exam 100%
12	<b>Module frequency</b>	only in winter semester

16	<b>Bibliography</b>	none

# Mandatory Elective Modules Group 2

1	<b>Module name</b> 48500	<b>Cell Adhesion and Cytoskeleton: Cell Biological, Biophysical, and Medical Aspects</b>	<b>5 ECTS</b>
2	Courses / lectures	The teaching units in the module are only offered in the winter semester.	
3	Lecturers	-	

4	<b>Module coordinator</b>	Dr. Ingo Thievensen	
5	<b>Contents</b>	<p><b>Lecture:</b> Cell-ECM and cell-cell adhesion; Cytoskeleton components; Mechanically loaded and non-loaded cell adhesions; Building principles and components of cytoskeleton-adhesion linkages; Cellular force generation; Activation of integrins and cadherins; Adhesion and cytoskeleton morphodynamics; Cytoskeletal pre-stress and cell morphodynamics; Cell migration cycle; Rho-GTPases; Adhesion signaling and control of cell proliferation/apoptosis, polarity, differentiation; Durotaxis, Haptotaxis, Chemotaxis; 2D and 3D cell migration; Cell migration modes; Cell adhesion and migration in embryonic development, tissue morphogenesis, tissue homeostasis and diseases; Fibrosis, myopathies, cancer, autoimmunity; Cell adhesion in tissue engineering; Fluorescent proteins and modern microscopy techniques in cell adhesion/cytoskeleton research.</p> <p><b>Laboratory course:</b> siRNA-mediated gene knockdown; High resolution short-term and low resolution long term live cell microscopy; Immunofluorescence staining; Western blot; Image analysis and data evaluation.</p>	
6	<b>Learning objectives and skills</b>	<p>Lecture</p> <p>The students are able to:</p> <ul style="list-style-type: none"> <li>• understand the basic concepts in cell and tissue mechanics and the concept of “molecular medicine”;</li> <li>• able to discern cellular, physical, and molecular aspects in biomedical contexts;</li> <li>• apply analytical and critical thinking and model building.</li> </ul> <p>Laboratory course:</p> <p>The students are able to:</p> <ul style="list-style-type: none"> <li>• postulate and experimentally test a hypothesis;</li> <li>• practice and learn how to apply standard cell biological, biophysical, biochemical, and</li> <li>• microscopical techniques.</li> </ul>	
7	<b>Prerequisites</b>	Recommended knowledge: Basics of cell biology, material on specific topics is provided during the course.	
8	<b>Integration in curriculum</b>	semester: 1;2	
9	<b>Module compatibility</b>	Mandatory Elective Modules Group 2 Master of Science Integrated Life Sciences: Biology, Biomathematics, Biophysics 20192	
10	<b>Method of examination</b>	Written Oral (30 minutes) PL: oral examination 30 min. PL: protocol, graded tasked (10 pages)	
11	<b>Grading procedure</b>	Written (50%)	

		Oral (50%) 50% oral exam, 50% protocol
12	<b>Module frequency</b>	only in winter semester
13	<b>Workload in clock hours</b>	Contact hours: 60 h Independent study: 90 h
14	<b>Module duration</b>	1 semester
15	<b>Teaching and examination language</b>	english
16	<b>Bibliography</b>	-

1	<b>Module name</b> 66122	<b>Experimental Physics 3: Optics and Quantum Phenomena</b>	<b>7,5 ECTS</b>
2	Courses / lectures	The teaching units in the module are only offered in the winter semester.	
3	Lecturers	-	

4	<b>Module coordinator</b>	Prof. Dr. Christoph Marquardt
5	<b>Contents</b>	<p><b>Optik und Quantenphänomen</b></p> <p><b>Licht als Welle</b> Belege für die Wellennatur des Lichts, Herleitung der Wellengleichung aus den Maxwell-Gleichungen, Lösungen in Form von ebenen Wellen, Kugelwellen, monochromatische Felder.</p> <p><b>Licht und Materie</b> Einzelstreuer (getriebener Dipol, Lichtstreuung), Feldausbreitung im homogenen Material, Polarisierung und Stromdichte, modifizierte Maxwell-Gleichungen, modifizierte Wellengleichung, Stetigkeitsbedingungen an Grenzflächen, Brechungsgesetz, Fresnelformeln, Brewsterwinkel, Totalreflexion, frustrierte Totalreflexion und Tunneleffekt bei Licht, Polarisierung des Materials (Suszeptibilität, Dispersion).</p> <p><b>Geometrische Optik</b> Strahlenoptik, Matrizenoptik (Prinzip, Anwendung auf Linsen, Abbildungen), Hauptebenen, Abbildungsfehler (chromatische Aberrationen, Fehler für monochromatische Wellen), optische Resonatoren.</p> <p><b>Beugung und Interferenz</b> Ausbreitungsgleichung unter Randbedingungen, Huygenssches Prinzip, Fraunhoferbeugung (Entstehung des Beugungsbildes, Beugungsbilder, Grenzen), Mikroskope, Teleskope, Auflösungsgrenzen, Abbildungstechniken, das Auge. Polarisierung elektromagnetischer Felder Ebene Wellen im homogenen Material, Polarisierungsformen von Licht, Polarisationsphänomene im durchstrahlten Material, Doppelbrechung, polarisierende Elemente.</p> <p><b>Grundlegende Experimente zu Quantenphänomenen</b> Teilchencharakter des Lichts, äußerer lichtelektrischer Effekt (Photoeffekt), Hohlraumstrahlung nach Planck, Compton-Effekt, Wellencharakter von Teilchen (Elektronenbeugung, Streuung im Kristall), Konsequenzen der Wellennatur des Elektrons.</p> <p><b>Grundgleichungen der Quantenmechanik</b></p>

		Schrödinger-Gleichung, zeitunabhängige Schrödinger-Gleichung, Interpretation der quantenmechanischen Wellenfunktion, Kastenpotenzial, Tunneleffekt mit Materiewellen.
6	<b>Learning objectives and skills</b>	Die Studierenden <ul style="list-style-type: none"> <li>• erläutern und erklären die experimentellen Grundlagen und die quantitativ-mathematische Beschreibung der Optik und von Quantenphänomenen gemäß den detaillierten Themen im Inhaltsverzeichnis</li> <li>• wenden die physikalischen Gesetze und jeweiligen mathematischen Methoden auf konkrete Problemstellungen an</li> </ul>
7	<b>Prerequisites</b>	None
8	<b>Integration in curriculum</b>	semester: 1;2
9	<b>Module compatibility</b>	Mandatory Elective Modules Group 2 Master of Science Integrated Life Sciences: Biology, Biomathematics, Biophysics 20192
10	<b>Method of examination</b>	Oral (30 minutes)
11	<b>Grading procedure</b>	Oral (100%)
12	<b>Module frequency</b>	only in winter semester
13	<b>Workload in clock hours</b>	Contact hours: 90 h Independent study: 135 h

# MG3: Biological Structures and Processes

1	<b>Module name</b> 48121	<b>Interactions of Biological Macromolecules A</b>	<b>5 ECTS</b>
2	Courses / lectures	The teaching units in the module are only offered in the winter semester.	
3	Lecturers	-	

4	<b>Module coordinator</b>	Prof. Dr. Yves Muller
5	<b>Contents</b>	<b>Lectures</b> and <b>Tutorials</b> cover topics of interactions between biological macromolecules extending from protein-protein to protein-DNA and protein-ligand interactions. The following topics will be discussed: Energetic and thermodynamic contributions, the description of structural determinants, the use of homology modelling, the prediction of contiguous and non-contiguous interaction sites in proteins, experimental methods for studying interactions, the analysis of interaction surfaces via peptide mapping as well as selected examples of protein interactions involved in plant signalling networks.
6	<b>Learning objectives and skills</b>	The students will <ul style="list-style-type: none"> <li>• acquire an in-depth knowledge of structure-function relationships in interacting macromolecules</li> <li>• be able to assess the suitability of current experimental methods such as X-ray crystallography, NMR, peptide mapping, ITC and SPR for studying protein-protein and protein-ligand interactions.</li> <li>• become familiar with bioinformatics methods to predict and analyse interactions between biological macromolecules.</li> <li>• gain fundamental knowledge in plant signalling networks</li> <li>• be able to present and critically discuss current research articles</li> <li>• be able to discuss their results and defend their conclusions in proper context</li> <li>• extended their capacity for teamwork and their communication as well as social competence</li> </ul>
7	<b>Prerequisites</b>	none
8	<b>Integration in curriculum</b>	semester: 1;2
9	<b>Module compatibility</b>	MG3: Biological Structures and Processes Master of Science Integrated Life Sciences: Biology, Biomathematics, Biophysics 20192
10	<b>Method of examination</b>	Portfolio PL: written examination 120 min. SL: exercise book (approx. 50 pages)
11	<b>Grading procedure</b>	Portfolio (100%) written examination 100 %
12	<b>Module frequency</b>	only in winter semester
13	<b>Workload in clock hours</b>	Contact hours: 60 h Independent study: 90 h

14	<b>Module duration</b>	1 semester

# Mandatory Elective Modules

## Group 3

1	<b>Module name</b> 42241	<b>Developmental Biology 2: Tissue Differentiation and Organogenesis</b> Developmental Biology 2: Molecular Control of Stem Cell and Organ Differentiation	<b>7,5 ECTS</b>
2	Courses / lectures	The teaching units in the module are only offered in the winter semester.	
3	Lecturers	-	

4	<b>Module coordinator</b>	Prof. Dr. Wiebke Herzog	
5	<b>Contents</b>	<p><b>Seminar</b> talks cover topics concerning the molecular mechanisms controlling developmental processes with an emphasis on tissue and organ development involving progenitor and stem cells in vertebrate and invertebrate model organisms.</p> <p>In the <b>laboratory course</b>, projects in small groups are pursued related to ongoing research in the participating labs, which address gene functions, transcriptional, and signalling processes during embryonic development and organogenesis (gonad, early embryo, muscle, and heart development).</p> <p>Among the techniques applied are molecular methods (PCR, gene cloning, sequencing), genetic methods (mutants, transgenic insects, RNAi, morpholino antisense nucleotides, gene over-expression), detection methods (in situ hybridization, histochemistry, transgenic markers), and microscopy (fluorescence microscopy, structured illumination, confocal microscopy) as well as other molecular and bioinformatic methods.</p>	
6	<b>Learning objectives and skills</b>	<p>Students will acquire the following skills: They will</p> <ul style="list-style-type: none"> <li>• be able to present and critically discuss results of current developmental research articles</li> <li>• become familiar with current concepts of developmental biology, including the molecular basis of developmental regulation</li> <li>• obtain an understanding of genetic techniques and methods used for analysis of developmental problems</li> <li>• be able to independently develop working hypotheses, and to plan and conduct experiments to test these</li> <li>• learn to discuss their results and defend their conclusions in proper context</li> </ul>	
7	<b>Prerequisites</b>	none	
8	<b>Integration in curriculum</b>	semester: 1;2	
9	<b>Module compatibility</b>	Mandatory Elective Modules Group 3 Master of Science Integrated Life Sciences: Biology, Biomathematics, Biophysics 20192	
10	<b>Method of examination</b>	Portfolio PL: oral presentation (15 min.) PL: poster presentation (10 min.)	
11	<b>Grading procedure</b>	Portfolio (100%) Oral presentation 50% Poster presentation 50%	

12	<b>Module frequency</b>	only in winter semester
13	<b>Workload in clock hours</b>	Contact hours: 120 h Independent study: 105 h
14	<b>Module duration</b>	1 semester
15	<b>Teaching and examination language</b>	english
16	<b>Bibliography</b>	Review articles will be provided electronically

1	<b>Module name</b> 48251	<b>Introduction to X-ray and Neutron Scattering I</b> Introduction to X-ray and neutron scattering 1	<b>5 ECTS</b>
2	Courses / lectures	The teaching units in the module are only offered in the winter semester.	
3	Lecturers	-	

4	<b>Module coordinator</b>	Prof. Dr. Tobias Unruh
5	<b>Contents</b>	<ul style="list-style-type: none"> <li>• Introduction to the basics of X-ray, light, and neutron scattering</li> <li>• mode of operation of different neutron instruments for elastic scattering</li> <li>• realization of components of neutron scattering instruments</li> <li>• kinematic theory of X-ray and neutron beam interferences</li> <li>• the lattice factor: particle size determination, strain analysis by neutron diffraction</li> <li>• the structure factor: single crystal structure analysis, experimental determination of the structure factor, the phase problem and its solution</li> <li>• implications for dynamic scattering theory</li> <li>• small angle scattering: diffuse small angle scattering, complex interferences in the small angle regime, contrast variation</li> <li>• introduction to the theory of inelastic scattering</li> <li>• mode of operation of neutron spectrometers</li> <li>• applications: phonons, molecular diffusion, intra-molecular motions</li> </ul>
6	<b>Learning objectives and skills</b>	<p>Students</p> <ul style="list-style-type: none"> <li>• explain the relevant topics of the lecture</li> <li>• apply the methods to specific examples</li> </ul>
7	<b>Prerequisites</b>	None
8	<b>Integration in curriculum</b>	semester: 1;2
9	<b>Module compatibility</b>	Mandatory Elective Modules Group 3 Master of Science Integrated Life Sciences: Biology, Biomathematics, Biophysics 20192
10	<b>Method of examination</b>	Written or oral PL: oral examination 30 min.
